NATIONAL CATTLE HEALTH DECLARATION

		1		
Owner of cattle	5. Are the cattle from an EBL accredited or certified free herd: Yes No Solution No Solution Solution No Solution			
(Full trading name)				
Property/place where the journey commenced(Address)		Yes No	□ Don't know □	J-BAS of (optional)
(**************************************				
(Address continued) (Town/suburb) (State) (Postcode)		7. On the property stated above, have cattle been co-grazed with dairy cattle and/or sheep? Yes No Don't know		
Property Identification Code (PIC) of this property This MUST be the PIC of the property that the stock is being moved from		8. Source herd has a negative JD test result: Check Test Sample Test		
Details of other statutory documents relating to this movem	ent e.g. NVD	Date of test/		
		9. If dairy cattle, the co	onsignment has a Dairy Assuranc	e Score of:
(Document type) (Document number) (Office of issue) (Expiry date)		Part A (herd base score) Part B (calf credits) Part C (total Dairy Score)		
Note: If NVD accompanying this declaration then you may go	straight to question 1	10. Treatments		
Description of cattle		Treatments	Product	Date of treatment
Number Description (Breed, sex e.g. Hereford Cross Steers)	Brands or Earmarks			within last 6 months
		Drench		
		Liver fluke treatment	<u> </u>	
Total		Other treatments (type)	<u>' </u>	
Consigned to			ns for the cattle being moved (see	
(Name of person or business)		Clostridial vaccination (_	ial vaccination (Botulism) : Yes
		Pestivirus vaccination:	 1	ephemeral fever vaccination: Yes
(Address) (Town/subur	b) (State) (Postcode)	Leptospira vaccination:		accination: Yes
Destination (if different) of cattle		JD (Silirum) vaccination:		
(Location address)	Other vaccinations (specify):			
		12. Any other relevant	t health information	
1. Has the owner stated above owned these cattle since birt	h?			
Yes No 🗆		DECLARATION (see exp	planatory notes for further information)	
2. On the property stated above, has an on-farm biosecurity plan been implemented? Yes No No		(Full name)	(Full addres	.s)
If yes, which plan (e.g. Farm Biosecurity, LBN, BioCheck)				
3a. Have these cattle been tested for the presence of pestivirus antigen? Yes No		(Address continued)	(To	own/suburb) (State) (Postcode)
If tested, were any cattle found to be persistently infected?	Yes No			dry of the cattle and that all the information in this irstood all the guestions that I have answered, that
3b. Have these cattle been tested for the presence of pest antibody?			the explanatory notes, and that I have ins	spected the animals and deem them to be healthy,
If tested what percentage of the tested cattle were antibody positive?		Signature*		Date/20
4. Enzootic Bovine Leucosis (EBL) test result for animals bein	g moved:			on, or make amendments which must be initialed.
Date of test/		Tel. no. ()	Email	

NATIONAL CATTLE HEALTH DECLARATION EXPLANATORY NOTES

OVERVIEW

The Cattle Health Declaration is a legal document. Please complete accurately before signing.

Cattle Heath Declarations are a way for producers to provide information about the health status of the cattle they are selling. Buyers should ask vendors for a Declaration and use the information provided to determine the health risks associated with the animals offered for sale.

Some states require testing or certification additional to that outlined in this document. e.g. Johne's disease (JD) in WA. Please check the entry requirements for any interstate movements at:

www.animalhealthaustralia.com.au/what-we-do/endemic-disease/livestock-movements/

The original is to be attached to the National Vendor Declaration (NVD) form accompanying the cattle, if applicable. A duplicate remains with the vendor; it is recommended the vendor retains a copy of this declaration for seven (7) years.

QUESTION 3: PESTIVIRUS TESTING

Persistently infected animals can be detected by conducting a pestivirus antigen test. This test only needs to be conducted once in an animal's life. Cattle that test positive in most cases are persistently infected animals. Pestivirus antibody testing may be done to check the pestivirus status of the herd. Contact your veterinarian for assistance in understanding the test results.

QUESTIONS 4 & 5 – ENZOOTIC BOVINE LEUCOSIS (EBL)

All cattle entering Tasmania must meet at least **ONE** of the following criteria:

- Cattle have been tested for EBL with the ELISA test within 42 days before shipment with
 negative results and evidence supplied via an attached laboratory report. If samples
 were pooled, no more than 10 sera or 30 milk samples were combined in each pool.
 Unweaned calves less that 12-weeks-of-age transported with their dam do not require
 testing for EBL; OR
- Dairy cattle from a registered dairy herd must be accredited as Monitored Negative (MN) or better, according to the national guidelines for EBL Control; OR
- Beef or beef-cross breeds must come from herds in Victoria, South Australia, Western
 Australia (excluding the cattle tick infected area), New South Wales (excluding the former
 North Coast Livestock Health and Pest Authority District), or Queensland (excluding the
 cattle tick infested area). The herd of origin must have been in existence for at least
 three (3) years with no evidence of EBL infection in the last three (3) years.

QUESTIONS 6, 7 & 8: JOHNE'S DISEASE BEEF CATTLE

Note: JD is a notifiable disease, so it is important to answer these questions.

Occurrence of JD refers to clinical disease in the herd or on the property. Clinical disease is an infected animal with chronic diarrhoea and weight-loss that does not respond to treatment.

The **Johne's Beef Assurance Score** (J-BAS) is a tool developed for JD risk profiling. Details are available on the Animal Health Australia website under 'JD in cattle'. The J-BAS is an initial guide and purchasers should ask for more information about JD in the origin herd (see JD in Cattle Biosecurity Checklist on the AHA website under 'JD in cattle'). Transitional arrangements are in place until 30 June 2017. The *National Farm Biosecurity Reference Manual - Grazing Livestock Production* provides a template to use for the property biosecurity plan. All plans should include the JD in Cattle Biosecurity Plan Checklist.

Check test – testing of 50 adult animals in the herd (or all eligible animals in a herd if less than 50 adult animals) biased to increase the probability of detecting infection, tested by ELISA, (pooled) faecal culture or (pooled) HT-J faecal PCR.

Sample test - screening of the adult herd or a large representative sample of the adult herd by an approved test (ELISA, (pooled) faecal culture or (pooled) HT-J faecal PCR).

QUESTION 9: JOHNE'S DISEASE DAIRY CATTLE

JD herd status information about Dairy Assurance Score calculation is available at www.dairyaustralia.com.au/bjd

QUESTION 10 & 11: TREATMENTS & VACCINATIONS

Provide details on any cattle treatments and vaccinations within the last six (6) months.

Some manufacturers include more than one of the categories listed in the same vaccine, known as a combination vaccine. If you use a combination vaccine, each agent(s), as appropriate, should be detailed.

For vaccinations to be current, you must have followed the manufacturer's recommendation for vaccination. Typically, young animals or first time vaccinated animals need two (2) doses, followed by annual boosters. As variations to this general rule do occur (e.g. Silirum is given once only), you must use the manufacturer's recommendations.

At the date the declaration is made and as a result of the vaccination(s) given, the animals are considered protected from the diseases marked as treated.

DECLARATION

This section must only be completed by the owner or person responsible for the husbandry of the cattle in the consignment.
